{ When your feet hurt, you hurt all over }

You want a solution to your foot pain? A solution that can really make a difference? Then, welcome to the next step in foot health: The Cluffy Wedge®.

THE CLUFFY WEDGE®

Congratulations on your decision to use the new orthotic enhancer; you will look younger as you walk, experience better balance and improve your overall well-being.

{ How the CLUFFY WEDGE® works }

The big toe joint is stiff in 90% or more of those who suffer from foot pain, and also leg, knee, hip, and lower back pain. The big toe is like a light switch, allowing the foot to function two different ways, as a shock absorber, and then as a stable structure. When the big toe is stuck, it's like a light switch that won't work. The Cluffy Wedge® allows the big toe to move freely, allowing the switch to work. Now it is possible for the foot to function as it was intended with normal motion of the big toe joint.

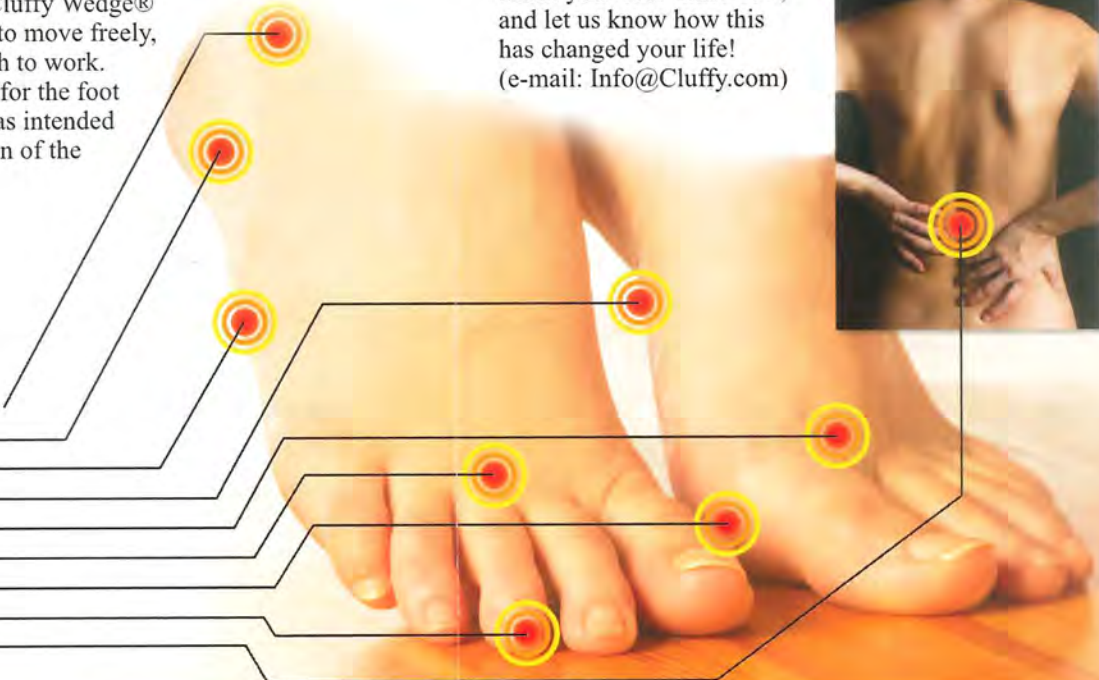

Shock absorber (low arch)

Stable structure (high arch)

The foot's motion limitations can show up as:

- Achilles tendon pain
- Heel pain
- Flatfeet
- Arch pain
- Pain in ball of foot
- Metatarsal pain
- Bunions
- Hammertoes
- Low back pain

When the big toe bends and permits the body to roll forward unhindered for the next step, you can take longer steps and roll over the ball of your foot, which will allow your foot to work properly. Then the big toe bears more weight, which lessens pressures on the ball of foot and relaxes tension in the toes.

By wearing these every day in your shoes with normal flexibility you will { walk PAIN FREE every day. } They look and feel great in sandals too.

{ Relief-FAST } Many people experience pain relief immediately in their heel, arch, ball of foot, Achilles tendon and bunions. Athletes have seen dramatic improvement in their performances and walking, jogging or running has never felt better. Others are excited to have ended the pain in their hips, knees and back within a few minutes of walking with the Cluffy Wedge®!

{ Is the CLUFFY WEDGE® too good to be true? }

You might tell us, as many others have, that it should be called the "miracle wedge." Make your foot smile now, and let us know how this has changed your life! (e-mail: Info@Cluffy.com)

What People are saying about the Cluffy Wedge®

"After four foot surgeries, the Cluffy Wedge® is the only thing that took away my foot pain."

Jennifer W., Marketing Representative

"When he doesn't wear the Cluffy Wedge® he gets shin splints and leg pain. When he wears the Cluffy Wedge® his pain goes away and he is a happy boy and everything is good again"

Kimberly M., talking about her 10-year-old-son Bridger

"I had pain in my right foot and I was advised to purchase the Cluffy Wedge®. It's been 3 years now and I haven't had any pain at all."

Terry H., 52-year-old-male

"Search You Tube™ for "Cluffy Wedge®"

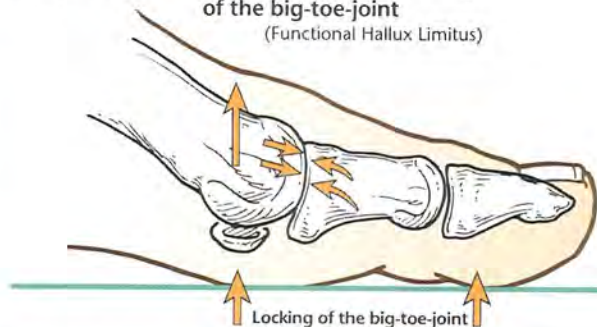

Cluffy Wedge® Patent #6,170,176, #6,874,258, #6,938,363 Additional Patents Pending

Warning: The Cluffy Wedge® is not intended for people suffering from circulatory diseases which result in infections or ulcerations on the bottom of the foot. In such circumstances, consult your podiatrist before using. As with any product, consult a medical professional if pain persists.

{ With or without Cluffy Wedge® }

Enhance foot stability and function by improving motion of the big toe joint. The Cluffy Wedge® allows your foot's natural stabilizing mechanisms to occur unimpeded. Improving your foot function is your first step to improving your sport or active lifestyle.

Abnormal foot function as a result of locking of the big-toe-joint (Functional Hallux Limitus)

Pressure scan showing abnormal foot function

Note the high pressures on the outside of the ball of the foot. This results in pain on the ball of the foot. Note also how the line of progression is crooked. This is not normal for the foot.

BEFORE (see green leg)

Without an insole and Cluffy Wedge this is a common walking pattern.

{ Optimizing Foot Performance }

The Cluffy Wedge® is positioned under the big toe. This frees up the joint and allows proper foot function. This small correction makes an enormous contribution toward aligning the body and optimizing foot performance as seen below.

Normal foot function as a result of unlocking the big-toe-joint with the use of the Cluffy Wedge®

Pressure scan with the use of the Cluffy Wedge®

Note that foot pressure is increased on the inside of the ball of the foot. Pain on the ball of the foot is alleviated. The line of progression is much straighter which results in a more normal walking pattern.

AFTER (see green leg)

| | Phase #1 | Phase #2 | Phase #3 |
|-------------------|----------|----------|----------|
| Insole | ✓ | ✓ | |
| Cluffy Wedge® | | | ✓ |
| Insole & Wedge® * | ✓ | ✓ | ✓ |

*Insole & Cluffy Wedge® is the only way to control all three phases of walking.
